ENVIRONMEMTAL MONITORING IN THE PARK :-

Environmental monitoring means using observational techniques and tools (such as sensors, wireless communications and remote management software) to detect, observe and measure environmental conditions at a specific site or location.

An environmental monitoring system is the process that monitors the quality of

the environment. The RMS software allows for a realtime monitoring of any parameter required. Rotronic offer solutions for relative humidity, temperature, dew and frost point, differential pressure, pressure, flow, lux and CO_2.
